

Further Activities

These teaching packs are designed as flexible educational tools for teachers to use in the full format or to tailor to their own curriculums.

Suggestions for some additional activities you may want to explore are listed below. If you have further ideas you would like us to consider including email your ideas to info@edgeofexistence.org.

1. A project on sustainable fish – which they should and should not eat
2. Write a story from the point of view of a coral reef species
3. Produce an information leaflet on corals – what they are, where they exist, which other species rely on them and the threats they face.
4. Research, discuss and debate which group of species are most important for a healthy ocean:
 - coral reefs;
 - big predatory fish (sharks, tuna); or
 - many smaller fish.
5. Create a poster for one of the ten EDGE coral species to highlight why it is so endangered and why it needs conserving.
6. Have a fundraising event to raise money for in the field conservation projects – and choose which species it goes to – at www.edgeofexistence.org
